

Brand Color System

Primary, secondary, accent, and background colors for consistent brand application.

Primary

#BDD631 • RGB 189, 214, 49

The core identity color. Use for the logo mark, key highlights, section markers, and anywhere the brand needs to be immediately recognizable. This is Waymarks' most distinctive color — lead with it in brand-first moments.

Secondary

#006543 • RGB 0, 101, 67

A supporting brand color. Use for body text on light backgrounds, secondary buttons, icons, and UI elements that need brand presence without competing with the primary color.

Accent

#22C448 • RGB 34, 196, 72

The action color. Use for links, active states, icons, and interactive highlights — anywhere you want to draw the eye without using the full CTA gradient.

Gradient — CTA

#BDD631 → #22C448

Primary blending into Accent, left to right — echoing the logo mark's own gradient. Reserved specifically for CTA buttons and hero highlights, so they stay instantly recognizable as Waymarks. Don't use it for body text or large fills.

Background — Dark

#00051D • RGB 0, 5, 29

The primary dark background. Use for hero sections, footers, and high-contrast brand moments. Primary, Accent, and the CTA gradient all sit well on top of this color.

Background — Light

#FFFFFF • RGB 255, 255, 255

The primary light background. Use for standard page and content backgrounds. Secondary, Accent, and the CTA gradient all sit well on top of this color.

Color Combinations in Use

How Primary, Secondary, Accent, and Background colors pair together across light and dark applications.
